# State Level Achievement Survey Class II 

2014-15<br>SUPPORTED BY<br>SSA-REMS FUND

## FOREWORD

Sarva Shiksha Abhiyan in Punjab is implementing a number of educational enhancement programmes through various schemes towards achieving the critical goal in Universalization of Elementary Education (UEE). SSA focuses on providing quality elementary education to all children bridging along the social, regional and gender gaps with active participation of the community. Punjab is a pioneer state in implementing various programmes like State Level Achievement Survey, Performance Indicators, Advancement of Educational Performances through Teacher Support, Quality Monitoring Tools etc.,

Education evaluation has confirmation and judgment functions concerning how well the educational goal is realized, based on the goal originally defined. It also has information gathering and application functions necessary for making decisions regarding learners, educational methods and administrative assistance. To assess the achievement levels of children in the curricular areas and to explore areas for further strengthening the academic inputs needed to improve the learning capabilities of children, a state level specific assessment survey was conducted during 2013 as an initiative of the State.

During SLAS 2014-15, in order to overcome the limitations of Classical Test Theory, Item Response Theory (IRT) has been used to compare performance over time and to analyses the data competency wise. IRT uses a mathematical model to link a student's chance of answering correctly a particular item to two main factors: the student's level of ability and the item's level of difficulty. State Level Achievement Survey (SLAS) has been conducted in 2013-14 for class III and 2014-15 for Classes II, III and VIII in Punjab. The survey tested the competencies that ought to be attained by students in every class. Practicing teachers, teachers and DIET faculty were involved in framing the test items, testing, data gathering and discussions.

SLAS has successfully explored and analyzed all areas of strengthening the learning outcomes among children. The report of SLAS is a diagnostic presentation of the existing levels of competencies among students and also throws light upon the areas which need to be improved in future. This report is need-based and gives valuable inputs for policy making, curriculum construction, research and setting up educational standards in Elementary Education.

## Executive Summary

## Introduction

The State Learning Achievement Survey (SLAS) is a process to find out hard spots and collect relevant data regarding health of education system. It helps to make policy for the remedial process. In the year 2013, the State Learning Achievement Survey (SLAS) conducted by SCERT for the first time in Punjab as an independent project, was incorporated into the Government's flagship project Sarva Shiksha Abhiyan(SSA). SCERT is responsible for developing tools and conducting the surveys whilst funding is provided by the SSA under REMS.
In 2013, The SLAS of class III was conducted by the SCERT, according to the guidelines provided by NCERT. This year NCERT directed the state to conduct a sample survey of class II, III \& VIII. However, the importance of these surveys and the experience gained through the first survey made it clear that this programme should be an ongoing feature of the State education system.

## Methodology

## Sample Selection

For Class II SLAS, government and government-aided schools were included in the sample frame. The general selection procedure was:

- Selection of schools (PPS within each selected districts)
- Selection of students(SRS with in selected schools)

The survey was administered to a sample of 3520 students, 176 schools and 22 districts.

## Tool Development

For the survey, subject tools and three questionnaires ( $P Q, T Q$ and $S Q$ ) were developed. The tools employed need to be simple, understandable, accessible, valid and reliable. For the purpose a subject expert committee was made. These subject experts were from Lecturers in DIETs and teachers from schools. After formation of subject expert committee training was imparted for the development of testing tools. In order to measure reliably the achievement levels of students of class II, tests in two subjects, viz. Language and Mathematics were developed. The first sten was to collect the syllabuses and the text books of Language and Mather then analysed from the point of view of the content areas competencies to be developed. In each subject, common
competencies were identified. Based on this analysis, subject-specific assessment frameworks were developed. These described the content areas and competencies to be covered and prescribed the number and type of items to be used for testing each domain. In order to provide sufficient information, two test forms were developed for each subject. For the Class II SLAS, each test consisted of 40 multiple-choice items. Of these, 15 were common 'anchor items' which appeared in both test forms. Thus, overall 65 unique items were used in each subject to measure learning achievement. Finally, answer keys were developed and checked for each test form in each subject.

## Test administration

SLAS is conducted by the State Council of Educational Research and Training (SCERT). To coordinate the SLAS project in districts, SCERT takes the help of DIETs. For the current survey, each participating district designated a District Coordinator who was responsible for implementing the SLAS in their districts in accordance with SLAS guidelines. State coordinators were given training on how to collect data in the field. For this a detailed training manual was developed. Thereafter, State Coordinators provided training to district coordinators about the conduct of main achievement survey. In each selected district, district coordinators appointed field investigators. They were given a rigorous training about selection of sections and students in the sampled schools, administration of tools and transfer of responses from test booklets to separate response sheets. These response sheets were collected by the district coordinators and then data was entered by the district coordinators with the help of district MIS coordinators. State Coordinators and their teams are to be commended for their efforts. Without their help and professionalism, the massive task of data collection for the State learning Achievement Survey would not have been possible.

## Monitoring

Monitoring of administration of tools was done at the state and district levels as well. At state level SCERT faculty and at district level DIETs monitored the activities to ensure the quality of data.

## Data Management and Analysis

The work of transferring the data from paper to electronic format was done by MIS wing of department. Keeping in mind the objectives of study, $d$ analysis plan were developed. Data entry plan was providec undertaking the assigned task in a systematic manner. The MIS
and resolved the problems of mismatching information. Cleaned files were used for analysis. Data analysis was carried out by using Classical Test Theory (CTT) and Item Response Theory (IRT).

## Main Finding

## Language: Punjabi

- The state average score is $75 \%$ and average scale value of state is 250 .
- The average achievement of students in Punjabi varies greatly across the districts of Punjab. There is a highly significant difference between outcomes in high scoring districts such as Fazilka (91\%), Muktsar \& Nawanshahr (88\%), Tarantarn (83\%), and low scoring districts such as Roopnagar (55\%) and Fatehgarh Sahib (57\%).
- Districts also vary greatly in the range between their lowest and highest achieving students as revealed by their inter-quartile score ranges. Some districts such as Fazilka (7.5) have relatively homogeneous cohorts whilst others have far more diverse outcomes, e.g., Fatehgarh Sahib (45).
- The average achievement of boys and girls has no significant difference.
- The average score of rural and urban has no significant difference.
- The students from the SC category outperformed their peers in the Gen, BC and other categories by a statistically significant margin.
- There has been a significant difference in the average score of department schools and aided schools.

## Mathematics

- The state average score is $65 \%$ and average scale value of state is 250 .
- The average achievement of students in Mathematics varies across the districts of Punjab. There is a highly significant difference between outcomes in high scoring districts such as Fazilka (89\%), and low scoring districts such as Fatehgarh Sahib (45\%).
- Districts also vary greatly in the range between their lowest and highest achieving students as revealed by their inter-quartile score ranges. Some Districts such as S.B.S. Nagar (13.1) and Fazilka (10) have relatively homogeneous cohorts whilst others have far more diverse outcomes, e.g., Jalandher (37.5) and Fatehgarh Sahib (40.0).
- The average achievement of boys and girls has no significant difference.
- There has been significant difference in the average of rural and urban area.
- The survey did find that students from the SC category peers in the, BC and General categories by a statistically si
- There has been no significant difference in the average s Created with and aided schools.

## Limitations

This survey undoubtedly represents a significant step forward in the development of education in Punjab. However, as with all such enterprises, lessons have been learnt. In conducting the Class II SLAS, the following limitations have been noted so that they may be addressed in future achievement surveys:

* The survey used DISE 2013-14 data from the MIS- SSA Punjab as the primary sample frame. Once in the field, significant discrepancies between the DISE data and actual school enrolments were noticed.
* Due to discrepancies in the sample frame deviation from agreed sampling procedures and loss of information during administration, it was not possible to estimate sample weights for the survey.
* In all selected districts, the coordinator was from DIET's faculty. It was decided that the field investigator should be chosen from the senior most class of DIET's. On reflection, the training and hands-on practice given to these field investigators may not have been sufficient resulting in inefficiencies in the data collection procedure.
* In order to meet the key objectives of this survey, schools and students were sampled in a systematic fashion, meant that teachers could not be explicitly sampled. As a result, the analysis of teacher-related variables vis-à-vis student's attainment could not be made in a comprehensive manner.
* In this survey SCERT also used IRT for analysis of results. Therefore, results are reported in terms of scale scores rather than percentage. Whilst this is an important step towards emulating international best practice, unfamiliarity with this approach has undoubtedly made it more difficult for the lay reader to interpret results. It is hoped that understanding will improve of IRT with time.
* Difference between the research study and exam/test is not clear to the field.

## Chapter 1 INTRODUCTION

This report summary gives a brief of the findings of the State Learning Achievement Survey (SLAS) of class II students conducted in 2014 by the State Council of Educational Research and Training (SCERT). This report is based on information gathered through test and questionnaires administered to a sample comprising 3520 students in 176 schools across 22 Districts. The subjects covered were Mathematics and Punjabi.
The aim of SLAS is to provide reliable information on the achievement of the students in the elementary sector of education in government and government aided schools. This is achieved not only by applying standardized test to students, but also collecting information about relevant background factors, such as school environment, instructional practices, qualification and experience of teachers, and the home background of students. The data from SLAS gives policy makers, curriculum specialists, researchers and, most importantly, school heads and teachers a 'snapshot' of students' achievements in key subjects at a particular point in time. By repeating such measurement at regular intervals, trend can be explored providing an invaluable perspective from which to consider educational reform and improvement.

It should be noted that whilst each SLAS provides achievement scores for the state, for each participating district and for certain group (e.g. Gender, Area etc.), it does not give scores to individual student and school.

### 1.1 SLAS in Punjab

The State Learning Achievement Survey (SLAS) is a process to find out hard spot and collect relevant data regarding health of education system. It helps to make policy for the remedial process. In the year 2013, the State Learning Achievement Survey (SLAS) conducted by SCERT for the first time in Punjab as an independent project, was incorporated into the Government's flagship project of Sarva Shiksha Abhiyan (SSA). SCERT is responsible for developing tools and conducting the surveys whilst funding is provided by the SSA under REMS.

Since 2001 National Council of Educational Research and Training (NCERT) has been periodically conducting National Achievement Survey(NAS).The NAS reports gave a national and state level picture rather than scores of individual student, school or district. The purpose of these assessments is to obtain an overall picture of what the students in specific class, knows and can do. These findings can also be u:
areas that need improvement and to form policies. The finding can also be useful to invent the interventions for the improvement of children's learning under the SSA programme. But last year, the NCERT gave the direction to the state to conduct State Learning Achievement Survey (SLAS).The responsibility of conducting SLAS was given to SCERT under the Flagship of SSA.
In 2013, the SLAS of class III was conducted by the SCERT, according to the guidelines provided by NCERT. This year NCERT directed the state to conduct a sample survey of class II, III \& VIII. However, the importance of these surveys and the experience gained through the first survey made it clear that this programme should be an ongoing feature of the State education system.

At the class II and III level, assessment is made in two subjects, i.e Mathematics and Language (Punjabi). For class VIII, four subject are assessed i.e. Mathematics, Language (Punjabi), Social Science and Science. The comprehensiveness and coverage of these surveys provide very useful datas to capture the progress of the education system as well as to enhance the quality of elementary education.

### 1.2 Development of tools

For any large survey, the tools employed need to be simple, understandable, valid and reliable. For measuring reliably the learning levels of class II are important. The tests need to be pegged at the level that they measure the abilities developed in children across the districts. Therefore, before undertaking the test development, it was necessary to know what was taught in class II. The first exercise, hence, was to collect the syllabus and the textbooks of Mathematics, Language (Punjabi). These were then analysed from the point of view of the content areas covered and competencies acquired. The common core content and competencies were identified for developing the tests.

Based on the analysis, assessment frameworks were developed in each subject. The frameworks described the competencies to be covered in the tests, the number and type of items to be used for testing each competency, the structure of the test forms and number of tests forms to be used.

For measuring each learning outcome with sufficient precision, it was necessary to construct multiple test forms in each subject. A three dimensional grid was prepared in each subject indicating the content areas to be covered, skills to be tested, the difficulty level of items under each skill along with the number of items.

## Item writing workshop

## General

The item writing workshop included plenary sessions on fundamental principles of test development and subject specific workshops for writing and reviewing/editing draft items. The general principles covered were:
$>$ Characteristics of sample-based achievement surveys
$>$ Test specifications and their role in test development
$>$ Item writing rules and guidelines
$>$ Procedures and checklists for reviewing the quality of items
> Introduction to classical item statistics.

### 1.2.1 Language

There was one sub-group - Punjabi. The work was guided by the draft specifications for the language test prepared by SRG, text books and with the help of NAS. The tasks covered were:
$>$ The Working Group came to a common understanding of the main principles of item writing and quality control.
> The Working Group drafted more than 120 items.
$>$ All these items were peer reviewed.
$>$ The Working Group proposed the use of the following classification system for Language topics:

- Listening
- Speaking
- Reading
- Writing
$>$ Sufficient passages and discrete items were prepared and reviewed to create booklet for pre-testing/Piloting.
The next steps undertaken were:
$>$ Entering all items into the computer and checking.
> Selecting items for two booklets for Pre- testing.
$>$ Reviewing, checking and proof reading all booklets.
> Language structure multiple-choice questions.
$>$ Checking again before 'passing for print' to ensure that the versions were 'cameraready'
download the free trial online at nitropdf.com/professional

### 1.2.2 Mathematics

The work was guided by the draft specifications for the Mathematics test prepared by SRG, and textbooks used in schools for Mathematics.

## Activities carried out in Mathematics Group

> The Working Group came to a common understanding of the main principles of item writing and quality control.
> The Working Group drafted more than 120 items.
> All these items were peer reviewed.
> The Working Group proposed the use of the following classification system for Mathematics topics:

- Number System
- Computations (operations)
- Measurement
- Geometry

The next steps undertaken were:
> Entering all items, reading passages, marking keys etc. into the computer and checking.
> Selecting items for two booklets for Pre- testing.
> Reviewing, checking and proof reading all booklets.
> Language structure multiple-choice questions.
> Checking again before 'passing for print' to ensure that the versions were 'cameraready'

### 1.2.3 Piloting of the test items

In order to standardise the tests, they were piloted to see how the items worked. The difficulty level ( $p$-value) and discrimination index (DI) were computed. Item were carefully scrutinised to select suitable items for the final tests. By and large, the items having difficulty indices ( $p$-values) between 0.2 and 0.8 were selected.
download the free trial online at nitropdf.com/professional

### 1.2.4 Sampling for piloting

The following procedure was used:

1. A sampling strategy was developed based on District Information System for Education (DISE) data for the school (2013-14).
2. The sample was not random, but was based on the statistical requirement of having enough records for each item (for analysis) and at the same time, diversity of the students/schools in the education system.
3. A booklet with different competences was designed (for all the subjects).
4. A booklet was equally distributed among the students of selected section of the concerned class.
5. Mohali district was selected taking into account the diversity of socio-economic background variables i.e. keeping in mind the strata of area from urban and rural, the schools were selected

### 1.2.5 Administration of tools for piloting

$>$ Field investigators were trained on the required procedure.
$>$ The school (from the selected schools list) was assigned to the Field Investigator.
$>$ Field investigators administered the test in the selected school. It took two days for the individual to complete the test as there were two subject to be administered.
$>$ Student responses were transferred to data sheets by the field investigators.
$>$ The SCERT collected the data (Hard Copy) from the field investigator after the compilation.

### 1.2.6 Data analysis

> Data entry of the compiled data (Hard Copy) was carried out by Data Entry Operator.
> Data was analysed by the outsourced consultant through IRT(Item response theory).
> Data was also analysed by the SRG through CTT (Classical test theory).
$>$ Item parameters were used to select the items in the context of National Assessment Survey.
> Poorly performed and flawed items were rejected.

### 1.2.7 Test booklet construction

For the construction of booklets for the main survey all the items were properly reviewed and it was decided that within a subject, all the two forms would contain 15 anchor items. The structure of the Language (Punjabi) and Mathematics was as under.

In the two subjects, the following domains were identified:

| Language (Punjabi) | Mathematics |
| :---: | :---: |
| Listening | Number System |
| Speaking | Computations (operations |
| Reading | Measurement |
| Writing | Geometry |

In each domain, there were a number of sub-domains or topics. These items were again vetted by subject experts. Each test was reviewed in the light of the content area covered, competency covered, appropriate language, estimated difficulty level and also the homogeneity of distracters.
Finally, for class II (SLAS), each test form for Language (Punjabi) and Mathematics, consisted of 40 multiple choice items. Thus, overall 65 items were used in each subject to measure learning achievement.

### 1.2.8 Questionnaires

Questionnaires for class II (SLAS) were built upon experience from the earlier SLAS and NAS surveys. For this survey, three questionnaires were developed to collect information on
a) schools,
b) teachers, and
c) pupils and their backgrounds.

The school and teacher questionnaires were produced in English only, as it was considered that school principals and teachers were proficient in these languages.

The pupil questionnaire was strongly influenced by NAS. The pupil questionnaire contained questions pertaining to the home background of students. Areas touched upon included parents' level of education and occupation; help available at home for studies from parents and siblings; and the study materials and resources available at home. The questionnaire also investigated the experience of pupils in school. This included questions about class work and homework given by teachers, and whether they liked coming to school etc.

The school questionnaire sought information on the location, enrolment and structure of the school; the number of school days; and the school's infrastructure and environment. Other questions related to teachers' job satisfaction and their professional development opportunities, curriculum transaction strategies, and problems existing in schools.

The teacher questionnaire comprised questions regarding the age of teachers, academic and professional qualifications, training programmes attended, teaching and evaluation practices, teaching materials available to them, interaction with other teachers and the school head, and their job satisfaction.

### 1.3 The SLAS Sample

The class II (SLAS) was designed to investigate learning achievement in the rural and urban area at the district level in state. Hence, the target population for the survey was all class II children studying in government and government-aided schools.

In general, the sample design involved a two-stage cluster design which used a combination of two probability sampling methods. In the First stage, the requisite number of schools was selected in the districts; for this PPS principles were used so that large schools had a higher probability of selection than small schools. In the second stage, the required numbers of students in each school were selected using the Simple Random Sampling (SRS) method. In schools where class II had multiple sections, an extra stage of selection was added with one section being sampled at SRS.
In the survey, PPS sampling was based on class II enrolment data from the DISE. SRS sampling was conducted according to the class registers available in sampled schools. Although the DISE data was not free from criticism, it was used because it was considered to be the most complete and up-to-date enrolment data available at the time of sampling. Unfortunately, due to discrepancies in the DISE data, limitations in the sampling method and loss of information at the sampling and administration stages of the survey, it was impossible to estimate sample weights for the survey.

### 1.4 Participating Districts and Sample Coverage

The survey covered all 22 districts. Exclusions of sub-populations from the total target population of SLAS class II were made at the initial stage of sampling. Large scale educational surveys allow such exclusions for reasons such as ensuring administrative efficiency, as long as the excluded population does not critically affect the quality of the survey. For example, the exclusion of very small schools from a target population is often accepted. In addition to the small school exclusion, the schools having fewer than 20 students were excluded. As a result of these exclusions, population coverage of the class II sample varies from district to district.

### 1.5 Characteristics of Participating Districts

Table 1.1 shows that the districts that participated in this survey vary greatly in their physical, demographic and socio-economic characteristics. For example Ludhiana, Amritsar, Gurdaspur, Jalandhar, Ferozepur each has population of more than 20, 00,000 whilst Rupnagar, Faridkot, SBS Nagar, Fatehgarh Sahib and Barnala have fewer than 7, 00,000 inhabitants. Muktsar has a population density of just 348 people per square kilometer whilst the corresponding figure for Ludhiana is over 978.
Of particular importance in this survey are the significant differences in the provision of education at the class II level. For example, the target population for this survey was all class II students enrolled in government-run and government-aided schools. However, the proportion of class II students in such schools varied significantly amongst districts.

Table 1.1: Physical, demographic and social indicators for the selected districts of Punjab

| Sr. <br> No | District $^{\text {1 }}$ | Population | Sex <br> Ratio | Literacy | Density | Class II Enrolment $^{2}$ <br> (According to selected Area $^{\text {and Management) }}$ |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: |
| 1 | Ludhiana | $3,498,739$ | 873 | $82.20 \%$ | 978 | 70346 |
| 2 | Amritsar | $2,490,656$ | 889 | $76.27 \%$ | 928 | 46172 |
| 3 | Gurdaspur | $2,298,323$ | 895 | $79.95 \%$ | 647 | 29018 |
| 4 | Jalandhar | $2,193,590$ | 915 | $82.48 \%$ | 836 | 36855 |
| 5 | Ferozepur | $2,029,074$ | 893 | $68.92 \%$ | 382 | 18070 |
| 6 | Patiala | $1,895,686$ | 891 | $75.28 \%$ | 570 | 34364 |
| 7 | Sangrur | $1,655,169$ | 885 | $67.99 \%$ | 457 | 27991 |
| 8 | Hoshiarpur | $1,586,625$ | 961 | $84.59 \%$ | 469 | 27825 |
| 9 | Bathinda | $1,388,525$ | 868 | $68.28 \%$ | 414 | 22485 |
| 10 | TaranTaran | $1,119,627$ | 900 | $67.81 \%$ | 464 | 21820 |

[^0]| 11 | Moga | 995,746 | 893 | $70.68 \%$ | 444 | 16853 |
| :---: | :--- | :---: | :---: | :---: | :---: | :---: |
| 12 | Mohali | 994,628 | 879 | $83.80 \%$ | 909 | 18316 |
| 13 | Muktsar Sahib | 901,896 | 896 | $65.81 \%$ | 348 | 16558 |
| 14 | Kapurthala | 815,168 | 912 | $79.07 \%$ | 499 | 14627 |
| 15 | Mansa | 769,751 | 883 | $61.83 \%$ | 350 | 13566 |
| 16 | Rupnagar | 684,627 | 915 | $82.19 \%$ | 505 | 10967 |
| 17 | Faridkot | 617,508 | 890 | $69.55 \%$ | 424 | 11525 |
| 18 | SBS Nagar | 612,310 | 954 | $79.78 \%$ | 478 | 10372 |
| 19 | Fatehgarh <br> Sahib | 600,163 | 871 | $79.35 \%$ | 509 | 10123 |
| 20 | Barnala | 595,527 | 876 | $67.82 \%$ | 402 | 10136 |
| 21 | Fazilka |  |  |  |  |  |
| 22 | Pathankot |  |  |  |  | 20113 |

These and associated factors are likely to influence students achievement and other educational outcomes. Therefore, when considering the findings of this survey and, in particular, when comparing the achievement levels of different districts, it is important to take the prevailing conditions into account to ensure that like is being compared with like.

### 1.6 Administration of Tools

When conducting SLAS, SCERT takes the help of districts agencies i.e. DIETs to coordinate survey activities in the districts. Each participating district designates a district coordinator who has the responsibility of implementing the SLAS in his/her district in accordance with the SLAS guidelines. The state coordinators are given training on how to collect data in the field. For this, a detailed guideline-cum-training manual was developed by SRG. Further, state coordinators provide training to district coordinators about the conduct of main achievement survey. In each selected district, district coordinators appoint field investigators. They are given rigorous training about selection of section and students in the sampled schools, administration of tools and transfer of response from test booklet to separate response sheet. These response sheets are collected by the district coordinators and then sent to the districts MIS coordinator after checking their number, coding of schools, and whether they have been properly filled by the investigators. These responses were transferred from response sheets to e-from by districts MIS coordinators and sent to state coordinator. Without the help, dedication, competence and experience of the districts coordinators and their teams for which they should be commended, the massive task of data collection for the State Learning Achievement Survey would not have been possible.

[^1]
### 1.7 Monitoring

For monitoring, it was communicated to the districts that the schools are to be monitored randomly during the actual conduct of the survey by the SCERT faculty. Similarly, 5-10 schools in each district are to be monitored by the District Institute of Education and Training (DIET) faculty.
It was found through the report received from SCERT and DIETs faculty that all the SCERT officials and $95 \%$ DIETs faculty visited the schools.

### 1.8 Data Management

The transfer of data from paper forms to electronic format was done by the districts MIS Coordinators. Data entry plan and data analysis plan were developed in the department keeping in mind the objectives of the study. Both plans were provided to the State MIS Coordinators for doing the assigned task in a systematic manner. The State MIS Coordinators provided soft copy of the data entered. In the department, the SRG team checked and verified the quality of the data and resolved problems of mismatching files. Files of clean data were finalized for further analysis. Data analysis was carried out by using both Classical Test Theory (CTT) and IRT (Item Response Theory).

### 1.9 Analysis of Data

In earlier surveys (by NCERT), the learning achievement data was analysed using CTT and average scores were reported simply as the percentage of correct answers. This approach, whilst valid, has significant limitations. In particular, the results are linked to particular tests and groups of students so it is very difficult to use multiple tests or to link results from one year to another. Therefore, it was decided to analyse the data for this and future surveys using Item Response Theory (IRT) in addition to the classical approach.
From the guidelines received from the NCERT, the state has used IRT and CTT. In this survey, a two-parameter logistic model was used. The main reason for administering the tests in this study was to obtain an estimate of the overall ability of the students tested. IRT assumes that there is a statistical connection between the difficulty of an item, the ability of the student, and the probability of being successful on the item. Students with higher ability scale scores are more likely to succeed on any item than their peers of lower ability, while all students are less likely to succeed on items with higher difficulty scores. In fact, a student's probability of success on a particular item is dependent on the difference between the ability of the student and the difficulty of the item.

Whilst this method makes the analysis more complex than traditior advantages. Firstly, it places students and test items on the san
enables us to produce meaningful 'maps' of items and students. Secondly, in IRT, the difficulty parameter for an item does not depend on the group of test takers. This allows us to use multiple test booklets which can be 'linked' or equated. This can also be used, for example, to compare scores from tests used in different years- an essential characteristic for monitoring progress over time.
SRG experts, after doing preliminary analysis, decided what kind of classical and IRT test analysis would be used for the analysis of the full dataset received from 22 districts. Under CTT, the performance of students on anchor items was carried out by computing percentage correct scores and averages, standard deviations of test scores, and t-values between different groups. Under IRT, a detailed analysis was carried out to determine the scaled scores, standard errors, significant differences between the groups etc.

### 1.10 Organisation of the Report

The report contains 10 chapters and appendices.
Chapter 1 (Introduction): Chapter 1 describes the background of SLAS, Piloting, Tool preparations, Sample and Methodology of survey etc.
Chapter 2 (Achievement in Language: Punjabi): In chapter 2, achievement in Language of class II students is presented. Their achievement in Language is reported overall and district wise. In addition, information about differences in achievement by students' gender, school location and social category is also provided.
Chapter 3 (What students know and can do: Punjabi): Chapter 3, describes what class Il students know and can do in Language.
Chapter 4 (Achievement in Language: Mathematics): In chapter 4, achievement in Mathematics of class II students is presented. Their achievement in Mathematics is reported overall and districts wise. In addition, information about differences in achievement by students' gender, school location and social category is also provided.
Chapter 5 (What students know and can do: Mathematics): Chapter 5 describes what class II students know and can do in Mathematics.
Chapter 6 (Anchor item analysis): Chapter 6 describes performance of students in anchor items.

Chapter 7 (Students, Teachers and School related information): Chapter 7 Students, Teachers and School related information.

### 1.11 Limitations

This survey undoubtedly represents a significant step forward in the development of education in Punjab. However, as with all such enterprises, lessons have been learnt. In conducting the Class II SLAS, the following limitations have been noted so that they may be addressed in future achievement surveys:

* The survey used DISE 2013-14 data from the MIS- SSA Punjab as the primary sample frame. Once in the field, significant discrepancies between the DISE data and actual school enrolments were noticed.
* Due to discrepancies in the sample frame, deviation from agreed sampling procedures and loss of information during administration, it was not possible to estimate sample weights for the survey.
* In all selected Districts, the coordinator was from DIET's faculty. It was decided that the field investigator should be chosen from the senior most class of DIET's. On reflection, the training and hands-on practice given to these field investigators may not have been sufficient resulting in inefficiencies in the data collection procedure.
* In order to meet the key objectives of this survey, schools and students sampled in a systematic fashion, meant that teachers could not be explicitly sampled. As a result, the analysis of teacher-related variables vis-à-vis student attainment could not be made in a comprehensive manner.
* In this survey SCERT also used IRT for analysis of results. Therefore, results are reported in terms of scale scores rather than percentage. Whilst this is an important step towards emulating international best practice, unfamiliarity with this approach has undoubtedly made it more difficult for the lay reader to interpret results. It is hoped that understanding will improve of IRT with time.
* Difference between the research study and exam/test is not clear in the field.

## Chapter 2 <br> Achievement in Language: Punjabi

Keeping in mind listening, speaking, reading and writing, the Language tests used in the SLAS included four categories of items. Overall achievement in language is reported for each of the participating districts. In addition, information about differences in achievement by student gender, school location and social category is provided.

### 2.1 Performance of districts in Punjabi

Tables 2.1 and 2.2 show the distribution of student's achievement for districts. Within each table, districts are listed in alphabetical order. Table 2.1 represents the analysis done through IRT (Item response theory), the table lists each district's average score on a scale from 0 to 500 . For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process. Table 2.2 represents the analysis done through CTT (Classical test theory); the table lists each district's average in percentage. For each score, the 'standard error' is also given to indicate the degree of imprecision arising from the sampling process. Finally, the tables indicate whether a district's average score is significantly different from the state's average or not.

Table 2.1: Districts wise average score in Punjabi (Through IRT)

| District | Average Score | SE | Significant difference |
| :--- | :---: | :---: | :---: |
| Amritsar | 256 | 10.9 | No |
| Barnala | 259 | 5.3 | No |
| Bathinda | 251 | 9.8 | No |
| Faridkot | 242 | 7.4 | No |
| Fatehgarh Sahib | 217 | 17.4 | No |
| Fazilka | 292 | 5.7 | Above |
| Ferozepur | 251 | 4.4 | No |
| Gurdaspur | 242 | 16.2 | No |
| Hoshiarpur | 239 | 5.1 | Below |
| Jalandhar | 221 | 13.2 | Below |
| Kapurthala | 263 | 4.9 | Above |
| Ludhiana | 269 | 7.0 | Above |
| Mansa | 252 | 9.3 | No |
| Moga | 263 | 2.5 | Above |
| Mohali | 214 | 11.5 | Below |
| Muktsar Sahib | 287 | 18.3 | Above |
| S.B.S Nagar | 281 | 7.5 | Above |
| Pathankot | 258 | 5.4 |  |
| Patiala | 225 | 10.4 |  |

| Rupnagar | 208 | 12.8 | Below |
| :--- | :---: | :---: | :---: |
| Sangrur | 250 | 9.0 | No |
| TaranTaran | 268 | 6.1 | Above |
| State | $\mathbf{2 5 0}$ | $\mathbf{2 . 1}$ |  |

The average score was 250 (with a standard error of 2.1).The results reveal substantial differences in achievement of language between the highest performing district (292 for Fazilka) and the lowest performing district (208 for Rupnagar).Seven districts had average scores significantly above from that of the state; Five districts had average scores significantly below from that of the state; and Ten districts had average scores that were not significantly different from that of the state.

Table 2.2: Districts wise average score in Punjabi (Through CTT)

| Districts | Average | Standard <br> Error | Standard <br> Deviation | Significance <br> Difference |
| :---: | :---: | :---: | :---: | :---: |
| Amritsar | 78 | 1.4 | 16.7 | No |
| Barnala | 80 | 1.0 | 12.6 | Above |
| Bathinda | 75 | 1.7 | 22.2 | No |
| Faridkot | 72 | 1.4 | 18.1 | No |
| Fatehgarh Sahib | 57 | 2.5 | 30.9 | Below |
| Fazilka | 91 | 1.3 | 17.4 | Above |
| Ferozepur | 76 | 1.3 | 16.0 | No |
| Gurdaspur | 71 | 2.4 | 31.1 | No |
| Hoshiarpur | 71 | 1.5 | 18.2 | No |
| Jalandhar | 60 | 2.0 | 25.7 | Below |
| Kapurthala | 81 | 1.3 | 14.7 | Above |
| Ludhiana | 86 | 1.1 | 14.8 | Above |
| Mansa | 77 | 1.2 | 14.9 | No |
| Moga | 81 | 1.5 | 16.7 | Above |
| Mohali | 58 | 2.2 | 28.0 | Below |
| Muktsar Sahib | 88 | 1.2 | 15.1 | Above |
| S.B.S. Nagar | 88 | 0.8 | 10.4 | Above |
| Pathankot | 80 | 1.1 | 14.0 | No |
| Patiala | 63 | 1.7 | 19.9 | Below |
| Rupnagar | 55 | 2.2 | 29.0 | Below |
| Sangrur | 76 | 1.3 | 14.7 | No |
| TaranTaran | 83 | 15 | 2.2 | 14.2 |
| State Average | 75 | 10.5 | Above |  |
|  |  |  | - |  |

Note: Percentage may vary due to round off
The average score was $75 \%$ (with a standard error of 2.2). The results reveal substantial differences in achievement of language between the highest performing districts ( $91 \%$ for Fazilka) and the lowest performing districts ( $55 \%$ for Rupnagar).Eight districts had above significance difference from the state's average score; Five districts had average scores significantly below from state; and nine districts had average scores that were not significantly different from that of the state.

### 2.2 Performance of various groups

The table below compares the average performances of different groups. Performance is compared by gender, school location, social category and management.

### 2.2.1 Gender related difference in Punjabi

Table 2.3 compares the average score achieved by boys and girls in Punjabi. It shows that there was no significant difference in average score of boys and girls. The table also represents that $51 \%$ boys and $49 \%$ girls were participating in the survey. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process.

Table 2.3: Gender wise average score in Punjabi (Through CTT)

| Gender | Participation <br> Sample | \% Participation | Average | SE | SD | Significance <br> Difference |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Boys | 1670 | $51 \%$ | 74 | 0.5 | 22.0 | No |
| Girls | 1587 | $49 \%$ | 75 | 0.5 | 23.2 |  |

Note: Percentage may vary due to round off
In table 2.4, analysis was carried out through IRT and it shows that, there is no significant difference between the average score of boys and girls.

| Table 2.4: Gender wise average score in Punjabi (Through IRT) |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| District | Boy <br> (Average) | SE | Girl <br> (Average) | SE | Significant <br> difference |
| Amritsar | 259 | 13 | 253 | 10.2 | No |
| Barnala | 255 | 6 | 263 | 6.1 | No |
| Bathinda | 245 | 9 | 256 | 12.7 | No |
| Faridkot | 242 | 8 | 242 | 8.2 | No |
| Fatehgarh Sahib | 231 | 21 | 205 | 13.8 | No |
| Fazilka | 289 | 7 | 296 | 5.6 | No |
| Ferozepur | 244 | 5 | 256 | 6.8 | No |
| Gurdaspur | 248 | 13 | 235 | 21.3 | No |
| Hoshiarpur | 236 | 6 | 241 | 5.1 | No |
| Jalandhar | 222 | 13 | 220 | 13.8 | No |
| Kapurthala | 256 | 5 | 267 | 6.4 | No |
| Ludhiana | 268 | 5 | 270 | 10.0 | No |
| Mansa | 247 | 10 | 258 | 8.5 | No |
| Moga | 259 | 3 | 267 | 4.5 | No |
| Mohali | 218 | 13 | 208 | 9.7 | No |
| Muktsar Sahib | 290 | 18 | 283 | 19.0 | No |
| S.B.S. Nagar | 280 | 9 | 282 | 8.3 | No |
| Pathankot | 260 | 6 | 256 | 7.7 | No |
| Patiala | 225 | 10 | 225 | 11.7 | No |
| Rupnagar | 204 | 16 | 211 | 10.9 | No |
| Sangrur | 247 | 8 | 254 | 10.4 | No |
| TaranTaran | 277 | 7 | 259 | $n$ | n |
| State | $\mathbf{2 5 0}$ | $\mathbf{2}$ | $\mathbf{2 5 0}$ |  |  |

In table 2.5, analysis was carried out through CTT and it shows that, in five districts: Barnala, Bathinda, Ferozepur, Kapurthala and Mansa boys' score is significantly below than girls' score, but in two districts- Fatehgarh Sahib and Tarantaran there has been significant difference between boys' and girls' score.

Table 2.5: District wise average score according to gender in Punjabi (Through CTT)

| Districts | Boys |  |  | Girls |  |  | Significance <br> difference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Avg. | SE | SD | Avg. | SE | SD |  |
| Amritsar | 78 | 2.0 | 17.6 | 78 | 2.0 | 15.7 | Nel |
| Barnala | 78 | 1.7 | 14.0 | 82 | 1.2 | 11.0 | Below |
| Bathinda | 72 | 2.4 | 20.9 | 78 | 2.4 | 23.0 | Below |
| Faridkot | 71 | 1.8 | 16.2 | 72 | 2.3 | 20.1 | No |
| Fatehgarh Sahib | 62 | 3.4 | 29.0 | 52 | 3.5 | 31.9 | Yes |
| Fazilka | 90 | 1.8 | 17.5 | 92 | 2.1 | 17.3 | No |
| Ferozepur | 72 | 2.2 | 17.4 | 79 | 1.6 | 14.3 | Below |
| Gurdaspur | 73 | 3.0 | 28.1 | 67 | 4.0 | 34.1 | No |
| Hoshiarpur | 70 | 2.1 | 19.7 | 72 | 1.9 | 16.1 | No |
| Jalandhar | 60 | 2.9 | 25.9 | 59 | 2.8 | 25.7 | No |
| Kapurthala | 79 | 1.5 | 10.3 | 83 | 1.8 | 16.7 | Below |
| Ludhiana | 84 | 1.4 | 12.8 | 85 | 1.8 | 16.5 | No |
| Mansa | 74 | 1.8 | 16.3 | 80 | 1.5 | 12.3 | Below |
| Moga | 80 | 1.7 | 13.4 | 83 | 2.7 | 19.9 | No |
| Mohali | 60 | 2.7 | 26.4 | 56 | 3.6 | 30.0 | No |
| Muktsar Sahib | 87 | 1.6 | 14.9 | 87 | 1.7 | 15.3 | No |
| S.B.S. nagar | 88 | 1.2 | 11.0 | 88 | 1.1 | 9.8 | No |
| Pathankot | 81 | 1.7 | 14.7 | 79 | 1.5 | 13.4 | No |
| Patiala | 62 | 2.2 | 19.8 | 63 | 2.7 | 20.1 | No |
| Rupnagar | 53 | 3.7 | 31.5 | 57 | 2.8 | 27.0 | No |
| Sangrur | 75 | 1.7 | 13.9 | 78 | 1.9 | 15.3 | No |
| TaranTaran | 87 | 1.4 | 11.6 | 79 | 1.8 | 15.4 | Yes |
| Note: Percentage may vary due to round off |  |  |  |  |  |  |  |

### 2.2.2 Area related difference in Punjabi

Table 2.6 describes the analysis of average score of the area selected. It shows that there was no significant difference in the average score of rural and urban area. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate how widely individuals in a group vary.

Table 2.6: Area wise average score in Punjabi (Through CTT)

| Area | Average | SE | SD | Significance Difference |
| :--- | :---: | :---: | :---: | :---: |
| Rural | 76 | 0.4 | 21.9 | No |
| Urban | 72 | 0.8 | 24.4 |  |
| Note: Percentage may vary due to round off |  |  |  |  |

Note: Percentage may vary due to round off

In table 2.7, analysis was carried out through IRT and it shows that, average scale score of rural area is 251 and urban area is 250 . It also shows that there was no significant differences in the average score of the area concerned.

Table 2.7: Area wise average score in Punjabi (Through IRT)

| District | Rural <br> (Average) | SE | Urban <br> (Average) | SE | Significant <br> difference |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Amritsar | 261 | 12.6 | 248 | 16.9 | No |
| Barnala | 253 | 4.1 | 275 | 16.8 | No |
| Bathinda | 247 | 11.0 | 265 | 21.3 | No |
| Faridkot | 248 | 11.2 | 232 | 6.6 | No |
| Fatehgarh Sahib | 222 | 23.6 | 209 | 19.5 | No |
| Fazilka | 292 | 6.5 | 293 | 0.0 | No |
| Ferozepur | 251 | 5.9 | 248 | 0.0 | No |
| Gurdaspur | 249 | 15.7 | 189 | 0.0 | Above |
| Hoshiarpur | 239 | 7.0 | 239 | 1.8 | No |
| Jalandhar | 220 | 17.9 | 222 | 18.9 | No |
| Kapurthala | 268 | 5.5 | 252 | 10.4 | No |
| Ludhiana | 265 | 9.4 | 283 | 0.3 | No |
| Mansa | 255 | 9.7 | 234 | 0.0 | Above |
| Moga | 262 | 2.0 | 273 | 0.0 | Below |
| Mohali | 212 | 14.4 | 218 | 15.3 | No |
| Muktsar Sahib | 282 | 20.1 | 317 | 0.0 | No |
| S.B.S. Nagar | 288 | 9.9 | 260 | 0.3 | Above |
| Pathankot | 260 | 3.0 | 252 | 18.2 | No |
| Patiala | 224 | 15.4 | 227 | 6.7 | No |
| Rupnagar | 208 | 7.2 | 208 | 33.3 | No |
| Sangrur | 248 | 10.3 | 266 | 0.0 | No |
| TaranTaran | 261 | 4.9 | 285 | 27.8 | No |
| State | $\mathbf{2 5 1}$ | $\mathbf{2 . 5}$ | $\mathbf{2 5 0}$ | 3.0 | No |
|  |  |  |  |  |  |

In table 2.8, analysis was carried out through CTT and it shows that, seven districts' rural area average score is significantly below than the urban area and five districts have significant difference in the average score. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate the how widely individuals in a group vary.

Table 2.8: District wise average score in Punjabi according to Area (Through CTT)

| Districts | Rural |  |  | Urban |  |  | Significance difference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Avg. | SE | SD | Avg. | SE | SD |  |
| Amritsar | 80 | 1.6 | 15.2 | 74 | 2.6 | 18.6 | No |
| Barnala | 78 | 1.2 | 12.8 | 86 | 1.7 | 10.6 | Below |
| Bathinda | 73 | 2.0 | 22.0 | 81 | 3.4 | 21.9 | Below |

### 2.2.3 Social class related difference in Punjabi

Table 2.9 describes the analysis of average score according social class. It shows that the average score of SC, BC, General and Others is $76 \%, 73 \%, 71 \%$ and $73 \%$ respectively. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate how widely individuals in a group vary. The average score of SC students have significant difference than $B C$ and Gen. It interprets that on an average SC performed better than BC, Gen and others.

Table 2.9: Social Class wise average score in Punjabi (Through CTT)

| Social Class | Average | SE | SD | Significance Difference |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | SC | BC | Gen | Other |
| SC | 76 | 0.4 | 21.4 | - | Yes | Yes | No |
| BC | 73 | 0.8 | 23.7 | Below | - | No | No |
| Gen | 71 | 1.3 | 25.7 | Below | No | - | No |
| Other | 73 | 6.4 | 24.2 | No | No | Nn | - |

In table 2.10, analysis was carried out through CTT and It shows district wise average score. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate that how widely individuals in a group vary.

Table 2.10: District wise average score according to Social Class in Punjabi (Through CTT)

| Districts | SC |  |  |  | BC |  |  |  | Gen |  |  | Other |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Moga | 80 | 1.7 | 17.4 | 87 | 2.2 | 7.6 | 90 | 0.0 | 0. | - | - | - |  |  |
| Mohali | 58 | 3.4 | 29.2 | 57 | 3.7 | 29.0 | 63 | 4.4 | 22.6 | 68 | 0.0 | 0.0 |  |  |
| Muktsar Sahib | 88 | 1.3 | 15.2 | 87 | 3.6 | 14.9 | 78 | 5 | 7.0 | - | - | - |  |  |
| S.B.S. Nagar | 88 | 1.1 | 10.5 | 86 | 1.6 | 9.8 | 91 | 2.1 | 10.7 | 85 | 0.0 | 0.0 |  |  |
| Pathankot | 78 | 1.3 | 13.3 | 83 | 2.6 | 15.4 | 87 | 0.8 | 1.4 | 81 | 9.3 | 20.7 |  |  |
| Patiala | 64 | 2.8 | 17.5 | 62 | 2.3 | 19.7 | 63 | 5.6 | 25.1 | - | - | - |  |  |
| Rupnagar | 56 | 3.2 | 26.8 | 57 | 3.6 | 28.9 | 49 | 6.3 | 34.2 | - | - | - |  |  |
| Sangrur | 78 | 1.6 | 15.7 | 81 | 2.4 | 11.8 | 74 | 2.9 | 11.8 | - | - | - |  |  |
| TaranTaran | 82 | 1.4 | 14.7 | 85 | 2.8 | 12.7 | 85 | 3.8 | 10.8 | - | - | - |  |  |

## Note: Percentage may vary due to round off

### 2.2.4 Managements related difference in Punjabi

Table 2.11 describes the analysis of average score according to Managements. It shows that the average score of department schools is $75 \%$ and aided schools is $71 \%$. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate that how widely individuals in a group vary. It also shows that there was a significant difference in the average score of department and aided schools. It does interpret that department schools perform better than aided ones.

Table 2.11: Management wise average score in Punjabi (Through CTT)

| Management | Average | SE | SD | Significance Difference |
| :--- | :---: | :---: | :---: | :---: |
| Department | 75 | 0.4 | 22.6 | Yes |
| Aided | 71 | 1.6 | 22.3 |  |
| Note: Percentage may be vary due to round off |  |  |  |  |

In table 2.12, analysis was carried out through CTT and it shows that in Amritsar, Ludhiana and Pathankot the average score of department school is significantly below than aided school, but in Kapurthala and Nawanshahr there was significant difference in average score of department and aided schools. In some district aided schools were not selected due less in number, non availability and PPS technique.

Table 2.12: District wise average score in Punjabi according to management (Through CTT)

| Districts | Department |  |  | Aided |  |  | Significance Difference |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :---: |
|  | Avg. | SE | SD | Avg. | SE | SD |  |

| TaranTaran | 83 | 1.2 | 14.2 | - | - | - | - |

Note: Percentage may vary due to round off

### 2.3 Range score in Punjabi

The table 2.13 illustrates the range of achievement of districts. The table list the scores achieved by students at key percentiles. For example, the score at the 25th percentile is the score which $75 \%$ of students achieve or surpass; the score at the 90th percentile is the score that $10 \%$ of students achieve or surpass. The range between the 25 th and 75 th
percentiles (the inter-quartile range) represents the performance of the middle $50 \%$ of students.

The inter-quartile range (i.e. the range between the 75th and 25th percentiles) is highly variable. For example, Fazilka has an inter-quartile range of just 7.5 whilst Fatehgarh Sahib has a corresponding value of 45 . These values suggest that the class II population in Fazilka is far more homogeneous than that of Fatehgarh Sahib. In most districts, the range of performance for the middle group was between 60 and 95 points. Performance at the 10th and 90th percentiles respectively shows extremes in low and high achievement. The range between these two points, which includes 90 percent of the population, is highly variable ranging from 15.8 (Fazilka) to 97.5 (Gurdaspur).
The percentiles provide additional information when comparing language performance amongst districts. For example, when the districts are arranged in order of average score, the differences between adjacent districts tend to be small. However, the range of scores may not be similar. For example, there is no significant difference between the median score of the Muktsar (88) and Nawashahr (88). However, the score ranges between the 25th and 75th percentiles are different: Muktsar 's range is 20 compared with Nawanshahr's range of 15 . This indicates that whilst average achievement is very similar in the two areas, Nawanshahr has a more heterogeneous group of class II students than the Muktsar .

Table 2.13: District wise Percentile score in Punjabi (Through CTT)

| District wise Percentile in Punjabi |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Note: Percentage may vary due to round off

### 2.4 Conclusion

The average achievement of students in Punjabi varies greatly across the districts of Punjab. There is a highly significant difference between outcomes in high scoring districts such as Fazilka (91\%), Muktsar \& Nawanshahr (88\%), Tarantarn (83\%), and low scoring districts such as Roopnagar (55\%) and Fatehgarh Sahib (57\%).

Districts also vary greatly in the range between their lowest and highest achieving students as revealed by their inter-quartile score ranges. Some Districts such as Fazilka (7.5) have relatively homogeneous cohorts whilst others have far more diverse outcomes, e.g.,Fatehgarh Sahib (45).

It was detected that average achievement of boys and girls has no significantly difference. Similarly, the average score of rural and urban has no significance difference.

The survey did find that students from the SC category outperformed their peers in the Gen, BC and other categories by a statistically significant margin. But in the management concern there have a significant difference in the average score of department schools and Aided schools.

The following chapter provides more information about what class II students at various levels of achievement know and can do in the domain of language Punjabi.

## Chapter 3

## What students know and can do: Punjabi

### 3.1 Overview of the Language Tests: Punjabi

In language, class II students were tested with two test booklets, which contained informational reading passage, items related to grammar and curriculum. The items were designed to test a range of relevant linguistic skill. These are classified as Listening, Speaking, Reading and Writing.

### 3.2 Sample Item

The items reproduced below were used in one of the tests of language Punjabi. Statistics showing how students responded to these items are given.

|  | Scale Score: 221 |
| :--- | :--- |
| -थहाट वगहमछ। |  |

This item requires students to have ability to speak. The scaled score of this item was 221 , i.e., significantly below the average level of difficulty of items in the survey. Around 67.8 \% of students in the sample were able to select the correct answer. The figure 3.1 shows how the remaining $22.2 \%$ responded.

## : Percentage of students response

## Scale Score: 220

 टितहैमीगोटठ dvwwil iKA wj w $V$

मेल - मेला

This item requires students to have ability to read words of same pronunciation correctly. The scaled score of this item was 220 , i.e., at significantly below the average level of difficulty of items in the survey. Around $68.4 \%$ of students in the sample were able to select the correct answer. The figure 3.2 shows how the remaining $31.6 \%$ responded.

## Percentage of students response

## Scale Score: 243

लिंग घटल్స:
छिटागठर: ठारा - ठाती
भाउा - $\qquad$

This item requires students to have ability to write simple words. The scaled score of this item was 243, i.e., significantly below the average level of difficulty of items in the survey. Around $55.3 \%$ of students in the sample were able to select the correct answer. The figure 3.3 shows how the remaining $44.7 \%$ responded.

Figure 3.3: Percentage of students response

## Sample Item: Writing

This item requires students to have ability to write simple words. The scaled score of this item was 223, i.e., significantly below the average level of difficulty of items in the survey. Around $66.7 \%$ of students in the sample were able to select the correct answer. The figure 3.4 shows how the remaining $33.3 \%$ responded.

Figure 3.4: Percentage of students response

## Scale Score: 199

 डिछिं लिदिया ताट्दे:
?

This item requires students to have ability to listen properly. The scaled score of this item was 199 i.e., significantly below the average level of difficulty of items in the survey. Around $77.8 \%$ of students in the sample were able to select the correct answer. The figure 3.5 shows how the remaining $22.2 \%$ responded.

Figure 3.5: Percentage of students response

## Scale Score: 238

 डिछ्ठिं लिचिभा नाद्दे:
ठां घंल वे नाह-यहाह रगटाछ।

This item requires students to have ability to speak. The scaled score of this item was 238 i.e., significantly below the average level of difficulty of items in the survey. Around 57.9\% of students in the sample were able to select the correct answer. The figure 3.6 shows how the remaining $42.1 \%$ responded.

Figure 3.6: Percentage of student's response

## Scale Score: 233

भापटे थिडा ती हा ठां लिध वे टिधण्ठ।

This item requires students to have ability to write on their on. The scaled score of this item was 233 i.e., significantly below the average level of difficulty of items in the survey. Around $60.2 \%$ of students in the sample were able to select the correct answer. The figure 3.7 shows how the remaining $39.8 \%$ responded.

Figure 3.7: Percentage of student's response

## Scale Score: 181

This item requires students to have ability to write. The scaled score of this item was 181 i.e., significantly below the average level of difficulty of items in the survey. Around $83.6 \%$ of students in the sample were able to select the correct answer. The figure 3.8 shows how the remaining $26.4 \%$ responded.

Figure 3.8: Percentage of student's response

### 3.3 What can students do in Language: Punjabi

The items were designed to test the linguistic skill. These are classified as Listening, Speaking, Reading and Writing. The table given below shows that how the sample students perform in various item related to different linguistic skill.

### 3.3.1. Linguistic skill: Listening

Table 3.1 shows the performance of students of class II on the linguistic skill: Listening.

Table 3.1: Performance of students of class II on the linguistic skill: Listening.

| Item ID | Scale scores | Percentage Correct |
| :---: | :---: | :---: |
| $\mathbf{1}$ | 187 | 82.5 |
| $\mathbf{2}$ | 207 | 74.8 |
| $\mathbf{3}$ | 137 | 93.6 |
| $\mathbf{4}$ | 216 | 70.3 |
| $\mathbf{5}$ | 173 | 86.8 |
| $\mathbf{6}$ | 224 | 66.1 |
| $\mathbf{7}$ | 216 | 70.1 |
| $\mathbf{2 9}$ | 188 | 81.9 |
| $\mathbf{3 0}$ | 194 | 79.7 |
| $\mathbf{3 1}$ | 199 | 77.8 |
| $\mathbf{3 2}$ | 224 | 65.8 |
| $\mathbf{4 1}$ | 214 | 70.4 |
| $\mathbf{4 2}$ | 217 | 68.8 |
| $\mathbf{4 3}$ | 155 | 90.3 |
| $\mathbf{4 4}$ | 159 | 89.5 |
| $\mathbf{4 5}$ | 209 | 72.8 |
| $\mathbf{4 6}$ | 205 | 74.4 |
| $\mathbf{4 7}$ | 234 | 60.1 |

On an average $76.4 \%$ sample students were able to give right response on the item related to listening skill.

### 3.3.2 Linguistic skill: Speaking

Table 3.2 shows the performance of students of class II on the Linguistic skill: Speaking.

Table 3.2: Performance of students of class II on the Linguistic skill: Speaking

| Item ID | Scale scores | Percentage Correct |
| :---: | :---: | :---: |
| $\mathbf{8}$ | 194 | 80.1 |
| $\mathbf{9}$ | 201 | 77.1 |
| $\mathbf{1 0}$ | 211 | 72.6 |
| $\mathbf{1 1}$ | 221 | 67.8 |
| $\mathbf{1 2}$ | 204 | 76.0 |
| $\mathbf{1 3}$ | 226 | 64.8 |
| $\mathbf{3 3}$ | 195 | 79.3 |
| $\mathbf{3 4}$ | 193 | 80.0 |
| $\mathbf{3 5}$ | 193 | 79.8 |
| $\mathbf{3 6}$ | 238 | 57.9 |
| $\mathbf{4 8}$ | 227 | 63.6 |
| $\mathbf{4 9}$ | 198 | 77.4 |
| $\mathbf{5 0}$ | 213 | 71.0 |
| $\mathbf{5 1}$ | 197 | 78.0 |
| $\mathbf{5 2}$ | 231 | 61.4 |
| $\mathbf{5 3}$ | 224 | 65.1 |

On an average $72 \%$ sample students able to give right response on the item related to Linguistic skill: Speaking.

### 3.3.3. Linguistic skill: Reading

Table 3.3 shows the performance of students of class II on the Linguistic skill: Reading.

Table 3.3: Performance of students of class II on the Linguistic skill: Reading

| Item ID | Scale scores | Percentage Correct |
| :---: | :---: | :---: |
| $\mathbf{1 4}$ | 171 | 87.3 |
| $\mathbf{1 5}$ | 220 | 68.4 |
| $\mathbf{1 6}$ | 220 | 68.0 |
| $\mathbf{1 7}$ | 223 | 66.8 |
| $\mathbf{1 8}$ | 186 | 82.7 |
| 19 | 184 | 83.4 |
| $\mathbf{3 7}$ | 164 | 88.7 |
| $\mathbf{3 8}$ | 159 | 89.7 |
| $\mathbf{3 9}$ | 162 | 89.1 |
| $\mathbf{4 0}$ | 225 | 65.1 |
| $\mathbf{5 4}$ | 182 | 83.4 |
| $\mathbf{5 5}$ | 227 | 63.8 |
| $\mathbf{5 6}$ | 230 | 62.3 |
| $\mathbf{5 7}$ | 233 | 60.2 |
| $\mathbf{5 8}$ | 248 | 52.0 |

On an average $73 \%$ sample students able to give right response on the item related to cognitive process of Application.

### 3.3.4. Linguistic skill: Writing

Table 3.4 shows the performance of students of class II on the Linguistic skill: Writing.

Table 3.4: Performance of students of class II on the Linguistic skill: Writing

| Item ID | Scale scores | Percentage Correct |
| :---: | :---: | :---: |
| 20 | 220 | 68.4 |
| 21 | 199 | 78.2 |
| 22 | 243 | 55.3 |
| 23 | 223 | 66.7 |
| 24 | 184 | 83.5 |
| 25 | 185 | 83.0 |
| 26 | 171 | 86.8 |
| 27 | 200 | 77.4 |
| 28 | 190 | 81.0 |
| 60 | 233 | 60.5 |
| 61 | 233 | 60.2 |
| 62 | 237 | 58.1 |
| 63 | 239 | 56.9 |
| 64 | 187 | 81.7 |
| 65 | 181 | 83.6 |

On an average $72 \%$ sample students able to give right response on the item related to Linguistic skill: Writing.

## Chapter 4

## Achievement in Mathematics

This chapter summarises the achievement of class II students in Mathematics in the State Learning Achievement Survey conducted in 2014. Overall achievement for each of the participating district is reported. In addition, information about differences in achievement by student gender, school location, social category and management is provided. For each district, a sample was drawn which was designed to be representative of the entire target population, i.e., all class II students studying in government and government-aided.

### 4.1 Performance of districts in Mathematics

The distribution of student achievement in Mathematics is given in Tables 4.1 and 4.2. Within each Table, districts are listed in alphabetical order. Table 4.1 represent the analysis done through IRT(Item response theory), The table list each district's average score on a scale from 0 to 500 . For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process.

Table 4.2 represents the analysis done through CTT (Classical test theory); the table lists each district's average in percentage. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process. Finally, the tables indicate whether a district's average score is significantly different from the State's average or not.

Table 4.1: District wise average score in Mathematics(Through IRT)

| District | Average Score | SE | Significant difference |
| :---: | :---: | :---: | :---: |
| Amritsar | 244 | 8.1 | No |
| Barnala | 261 | 13.1 | No |
| Bathinda | 247 | 10.5 | No |
| Faridkot | 241 | 3.5 | Below |
| Fatehgarh Sahib | 214 | 14.5 | Below |
| Fazilka | 294 | 8.6 | Above |
| Ferozepur | 262 | 3.8 | Above |
| Gurdaspur | 240 | 11.5 | No |
| Hoshiarpur | 242 | 16.4 | No |
| Jalandhar | 249 | 16.7 | No |
| Kapurthala | 231 | 7.9 | Below |
| Ludhiana | 275 | 9.4 | Above |
| Mansa | 254 | 4.8 | No |
| Moga | 252 | 8.7 | Nn |
| Mohali | 214 | 7.6 |  |

| Muktsar Sahib | 303 | 12.1 | Above |
| :---: | :---: | :---: | :---: |
| S.B.S. Nagar | 282 | 4.7 | Above |
| Pathankot | 262 | 8.8 | No |
| Patiala | 220 | 2.6 | Below |
| Rupnagar | 216 | 10.6 | Below |
| Sangrur | 251 | 10.6 | No |
| TaranTaran | 246 | 11.5 | No |
| State Average | $\mathbf{2 5 0}$ | $\mathbf{2 . 2}$ |  |

The table 4.1 shows that the average score of the state is 250 (with a standard error of 2.2). The results reveal substantial differences in Mathematics achievement between the highest performing districts ( 303 Muktsar) and the lowest performing districts ( 214 for Mohali and Fatehgarh Sahib). In Mathematics, six districts had average scores significantly below that of the group; five districts had average score significantly above that of group and eleven districts had average scores that were not significantly different from that of the group.

Table 4.2: District wise average score in Mathematics(Through CTT)

| Districts | Average | Standard Error | Standard Deviation | Difference |
| :---: | :---: | :---: | :---: | :---: |
| Amritsar | 62 | 1.6 | 19.2 | No |
| Barnala | 71 | 1.4 | 1.4 | No |
| Bathinda | 63 | 1.9 | 25.2 | No |
| Faridkot | 60 | 1.4 | 17.5 | No |
| Fatehgarh Sahib | 45 | 2.2 | 27.8 | Below |
| Fazilka | 89 | 1.3 | 17.2 | Above |
| Ferozepur | 72 | 1.2 | 13.9 | Yes |
| Gurdaspur | 62 | 2.5 | 31.5 | No |
| Hoshiarpur | 60 | 2.0 | 24.3 | No |
| Jalandhar | 64 | 2.2 | 27.8 | No |
| Kapurthala | 55 | 1.8 | 21.6 | Below |
| Ludhiana | 77 | 1.4 | 17.9 | Yes |
| Mansa | 69 | 1.3 | 15.1 | No |
| Moga | 68 | 1.5 | 16.5 | No |
| Mohali | 48 | 2.1 | 27.7 | Below |
| Muktsar Sahib | 88 | 0.8 | 10.8 | Above |
| S.B.S.Nagar | 82 | 0.8 | 10.5 | Above |
| Pathankot | 72 | 1.5 | 17.8 | Yes |
| Patiala | 48 | 1.2 | 13.8 | Below |
| Rupnagar | 49 | 2.1 | 27.0 | Below |
| Sangrur | 65 | 1.9 | 20.8 | No |
| TaranTaran | 63 | 1.9 | 20.6 | No |
| State Average | 65 | 2.5 | 12.1 |  |

download the free trial online at nitropdf.com/professional

Table 4.2 shows the analysis done through CTT (Classical Test Theory). Through CTT, it was found that the state average is $65 \%$ (with a standard error 2.5). The results reveal differences in Mathematics achievement between the highest performing districts (89\% for Fazilka and Muktsar 88\%) and the lowest performing districts (45\% for Fatehgarh Sahib). In Mathematics, five districts had average scores significantly below that of the group; three districts had average scores significantly above that of the group; three districts had average score significantly difference that of group and eleven districts had average scores that were not significantly different from that of the group.

### 4.2 Performance of various groups

The table below compares the average performances of different groups. Performance is compared by gender, school location, social category and management.

### 4.2.1 Gender related difference in Mathematics

Table 4.3 compares the average score achieved by boys and girls in Mathematics. It shows that there was no significant difference in average score of boys and girls. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process.

Table 4.3: Gender wise average score in Mathematics

| Gender | Average score | Standard Error | Significance difference |
| :---: | :---: | :---: | :---: |
| Boys | 65 | 0.6 | No |
| Girls | 65 | 0.6 |  |

Note: Percentage may vary due to round off
Table 4.4 shows the average scale score analysed through IRT. The Average scale score of boys' is 250(with a standard error 2.4) and girls' 250(with a standard error 2.4). There has been no significant difference between boys' and girls' average score.

Table 4.4: District wise average score according to gender in Mathematics (Through IRT)

| District | Boy <br> (Average) | SE | Girl <br> (Average) | SE | Significant difference |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Amritsar | 244 | 7 | 243 | 11.1 | No |
| Barnala | 261 | 15.1 | 261 | 12.2 | No |
| Bathinda | 240 | 8.5 | 252 | 12.9 | No |
| Faridkot | 239 | 2.7 | 244 | 5.6 | No |
| Fatehgarh Sahib | 217 | 22.9 | 212 | 10.4 | No |
| Fazilka | 292 | 9.4 | 297 | 9.7 | No |
| Ferozepur | 265 | 6.1 | 259 | 4.7 | NIn |
| Gurdaspur | 241 | 11.8 | 238 | 14.2 |  |

| Hoshiarpur | 237 | 18 | 248 | 17.8 | No |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Jalandhar | 248 | 17.2 | 249 | 16.7 | No |
| Kapurthala | 223 | 16.6 | 235 | 4.7 | No |
| Ludhiana | 277 | 7.7 | 272 | 13 | No |
| Mansa | 254 | 4.9 | 253 | 5.4 | No |
| Moga | 246 | 8.3 | 260 | 10.3 | No |
| Mohali | 223 | 5.5 | 202 | 9.8 | No |
| Muktsar Sahib | 306 | 9.6 | 299 | 14.6 | No |
| S.B.S. Nagar | 284 | 5.1 | 279 | 4.9 | No |
| Pathankot | 260 | 10.7 | 264 | 10.3 | No |
| Patiala | 219 | 2.2 | 220 | 4.7 | No |
| Rupnagar | 211 | 13.1 | 219 | 9.2 | No |
| Sangrur | 249 | 9.1 | 253 | 12.9 | No |
| TaranTaran | 252 | 10.4 | 241 | 13.4 | No |
| State | 250 | $\mathbf{2 . 4}$ | $\mathbf{2 5 0}$ | $\mathbf{2 . 4}$ | No |

Table 4.5 shows that In mathematics, Five districts had average scores significantly below that of the girls score; and one district had average scores that had significance different from that of the girls score .During analysis It has been found that in district Amritsar, Ferozepur, Ludhiana, Mohali, Muktsar sahib and S.B.S. Nagar boys' average score is higher than girls' score, which indicates that boys perform better than girls.

Table 4.5: District wise average score according to gender in Mathematics (Through CTT)

| Districts | Boys |  |  |  | Girls |  |  |

| Jalandhar | 64 | 3.2 | 28.2 | 64 | 3.1 | 27.5 | No |
| Kapurthala | 50 | 3.5 | 24.8 | 57 | 2.1 | 19.1 | Below |
| Ludhiana | 78 | 1.9 | 17.1 | 76 | 2 | 18.7 | No |
| Mansa | 68 | 1.8 | 16 | 69 | 1.8 | 14.1 | No |
| Moga | 65 | 2.1 | 16.7 | 71 | 2.1 | 15.8 | Below |
| Mohali | 52 | 2.7 | 26.4 | 42 | 3.5 |  |  |

| Muktsar Sahib | 89 | 1.1 | 10.2 | 86 | 1.2 | 11.2 | No |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| S.B.S. Nagar | 83 | 1.2 | 10.4 | 81 | 1.2 | 10.5 | No |
| Pathankot | 71 | 2.5 | 20.3 | 73 | 1.7 | 15.4 | No |
| Patiala | 48 | 1.6 | 14.2 | 48 | 1.7 | 13.4 | No |
| Rupnagar | 46 | 3.3 | 28.3 | 51 | 2.7 | 26 | Below |
| Sangrur | 64 | 2.6 | 20 | 66 | 2.9 | 21.8 | No |
| TaranTaran | 64 | 2.6 | 19.8 | 60 | 2.7 | 21.2 | No |

Note: Percentage may vary due to round off

### 4.2.2 Area related difference in Mathematics

In table 4.6 shows that the average scores of rural and urban area is $66 \%$ and 62 \% respectively. It also shows that there has been significant difference in the average score of Rural and urban area. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate the how widely individuals in a group vary.

Table 4.6: Area wise average score in Mathematics

| Area | Average | SE | SD | Significant Difference |
| :--- | :---: | :---: | :---: | :---: |
| Rural | 66 | 0.4 | 23.3 | Yes |
| Urban | 62 | 0.9 | 26.2 |  |

Note: Percentage may vary due to round off
In table 4.7, analysis was carried out through IRT and it shows that, average scale score of rural and urban area is 250 and 248 respectively.

Table 4.7: Area wise average score of districts in Mathematics(Through IRT)

| District | Rural(Average) | SE | Urban(Average) | SE | Significant <br> difference |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Amritsar | 245 | 11.3 | 242 | 15.8 | No |
| Barnala | 260 | 8.8 | 264 | 45.0 | No |
| Bathinda | 246 | 12.1 | 248 | 21.1 | No |
| Faridkot | 241 | 2.5 | 243 | 10.6 | No |
| Fatehgarh Sahib | 210 | 11.6 | 220 | 16.5 | No |
| Fazilka | 299 | 9.3 | 264 | 0.0 | Above |
| Ferozepur | 261 | 4.7 | 263 | 0.0 | No |
| Gurdaspur | 243 | 11.6 | 214 | 0.0 | Above |
| Hoshiarpur | 243 | 19.0 | 240 | 33.3 | No |
| Jalandhar | 250 | 17.8 | 247 |  |  |

| Kapurthala | 223 | 8.4 | 245 | 15.9 | No |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Ludhiana | 267 | 12.6 | 297 | 2.7 | Below |
| Mansa | 259 | 5.1 | 221 | 0.0 | Above |
| Moga | 255 | 9.2 | 226 | 0.0 | Above |
| Mohali | 217 | 6.6 | 206 | 22.8 | No |
| Muktsar Sahib | 301 | 13.7 | 310 | 0.0 | No |
| S.B.S Nagar | 283 | 5.6 | 278 | 8.6 | No |
| Pathankot | 256 | 7.9 | 282 | 26.0 | No |
| Patiala | 221 | 4.3 | 218 | 4.2 | No |
| Rupnagar | 220 | 1.6 | 208 | 28.3 | No |
| Sangrur | 250 | 12.4 | 265 | 0.0 | No |
| TaranTaran | 245 | 9.4 | 251 | 49.8 | No |
| State Average | 250 | 2.2 | 248 | 4.6 | No |

In table 4.8, analysis was carried out through CTT and it shows that, in district Kapurthala, Ludhiana, Muktsar Sahib, Pathankot and Sangrur the average score of rural area is significantly below than urban area, But in district Fazilka and Moga shows the significant difference in average score of rural and urban area and in district Mansa the average score of rural area is significantly above than the urban area. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate the how widely individuals in a group vary.

Table 4.8: Area wise average score of districts in Mathematics

| Districts | Rural |  |  |  | Urban |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
|  | Avg. | SE | SD | Avg. | SE | SD |  |
| Amritsar | 64 | 1.8 | 16.8 | 60 | 3.1 | 22.5 | No |
| Barnala | 71 | 1.5 | 15.1 | 70 | 3.8 | 22.6 | No |
| Bathinda | 63 | 2.3 | 25.6 | 65 | 3.7 | 23.9 | No |
| Faridkot | 61 | 1.7 | 17.3 | 60 | 2.4 | 18.1 | No |
| Fatehgarh <br> Sahib | 45 | 2.5 | 24.4 | 46 | 4.2 | 32.5 | No |
| Fazilka | 88 | 1.2 | 14.9 | 74 | 5.8 | 26.1 | Yes |
| Ferozepur | 72 | 1.3 | 14.1 | 71 | 3.1 | 13.2 | No |
| Gurdaspur | 64 | 2.5 | 29.4 | 49 | 9.3 | 41.8 | No |
| Hoshiarpur | 60 | 2.3 | 24.1 | 60 | 3.9 | 25.1 | No |
| Jalandhar | 64 | 3 | 29.6 | 65 | 3.2 | 24.9 | No |
| Kapurthala | 50 | 2.4 | 22.6 | 63 | 2.4 | 17 | Below |
| Ludhiana | 74 | 1.7 | 18.9 | 86 | 1.6 | 10.2 | Below |
| Mansa | 72 | 1.1 | 12.6 | 47 | 2.7 | $1^{\wedge}$ | n' |
| Moga | 69 | 1.6 | 16.7 | 55 | 2 | 1 |  |

| Mohali | 49 | 2.4 | 26.4 | 45 | 4.9 | 31.5 | No |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Muktsar Sahib | 87 | 0.9 | 11.2 | 92 | 1.4 | 6.4 | Below |
| S.B.S. Nagar | 82 | 1 | 11.3 | 82 | 1.2 | 7.7 | No |
| Pathankot | 69 | 1.7 | 18.1 | 80 | 2.4 | 14.5 | Below |
| Patiala | 49 | 1.5 | 12.9 | 46 | 1.9 | 14.8 | No |
| Rupnagar | 50 | 2.5 | 25.3 | 46 | 3.8 | 29.6 | No |
| Sangrur | 64 | 2 | 21.2 | 73 | 4.6 | 13.8 | Below |
| TaranTaran | 63 | 1.9 | 18.2 | 65 | 4.6 | 26.2 | No |

Note: Percentage may vary due to round off

### 4.2.3 Social class related difference in Mathematics

Table 4.9 describes the analysis of average score according to Social class. It shows the average score of SC, BC, General and Others is 66\%, 63\%, 60\% and 65\% respectively. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate the how widely individuals in a group vary. It also shows the significant difference in average score of SC students from BC and Gen.

Table 4.9: Social Class wise average score in Mathematics (Through CTT)

| Social Class | Average | SE | SD | Significant Difference |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | SC | BC | Gen | Other |
| SC | 66 | 0.5 |  | - | Yes | Yes | No |
| BC | 63 | 0.8 |  | Below | - | Yes | No |
| Gen | 60 | 1.4 |  | Below | Below | - | No |
| Other | 65 | 7.8 |  | No | No | No | - |

In table 4.10, analysis was carried out through CTT and it shows that in some district like Amritsar, Faridkot, Fatehgarh Sahib, Ferozepur, Ludhiana, Mansa, Moga and Mohali the average performance of general students is higher than SC students. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate that how widely individuals in a group vary.

Table 4.10: District wise average score according to Social Class in Mathematics

| Districts | SC |  |  |  | Gen |  |  |  | Other |  |  |  |
| :---: | :---: | :---: | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Avg. | SE | SD | Avg | SE | SD | Avg | SE | SD | Avg | SE |  |
| SD |  |  |  |  |  |  |  |  |  |  |  |  |

### 4.2.4 Managements related difference in Punjabi

Table 4.12 describes the analysis of average score according Managements. It shows that the average score of Department schools is $65 \%$ and Aided is $64 \%$. For each score, the 'standard error' is given to indicate the degree of imprecision arising from the sampling process, and 'standard deviation' is given to indicate the how widely individuals in a group vary. It also shows that there has been no significant difference in the average score of department and aided schools.

Table 4.12: Management wise average score in Mathematics (Through CTT)

| Management | Average | SE | SD | Significant Difference |
| :--- | :---: | :---: | :---: | :---: |
| Department | 65 | 0.4 | 24.1 | No |
| Aided | 64 | 1.8 | 25.8 |  |

Note: Percentage may be vary due to round off
In table 4.13, analysis was carried out through CTT and it shows that, in Amritsar, Faridkot, Hoshiarpur, Ludhiana and Pathankot the average score of department schools is significantly below than aided schools, but in Fatehgarh Sahib and S.B.S. Nagar shows significance difference between average score of department and aided schools.

Table 4.12: District wise average score according to Management in Mathematics

| Districts | Department |  |  | Aided |  |  | Significance Difference |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :---: |
|  | Avg. | SE | SD | Avg. | SE | SD |  |
| Amritsar | 61 | 1.8 | 19.8 | 71 | 2.7 | 12.2 | Below |
| Barnala | 71 | 1.4 | 17.3 | - | - | - | - |
| Bathinda | 63 | 1.9 | 25.2 | - | - | - | - |
| Faridkot | 59 | 1.4 | 16.9 | 69 | 4.3 | 19.5 | Below |
| Fatehgarh Sahib | 47 | 2.5 | 28.8 | 32 | 3.3 | 15.0 | Yes |
| Fazilka | 86 | 1.3 | 17.2 | - | - | - | - |
| Ferozepur | 72 | 1.2 | 13.9 | - | - | - | - |
| Gurdaspur | 62 | 2.5 | 31.5 | - | - | - | - |
| Hoshiarpur | 57 | 2.1 | 24.5 | 78 | 3.7 | 16.6 | Below |
| Jalandhar | 64 | 2.2 | 27.8 | - | - | - | - |

| Rupnagar | 50 | 2.4 | 26.6 | 46 | 4.4 | 28.1 | No |
| Sangrur | 65 | 1.9 | 20.8 | - | - | - | - |
| TaranTaran | 63 | 1.9 | 20.6 | - | - | - | - |

Note: Percentage may be vary due to round off

### 4.3 Range score in Punjabi

The tables 4.14 illustrate the range of achievement of districts. The tables list the scores achieved by students at key percentiles. For example, the score at the 25th percentile is the score which $75 \%$ of students achieve or surpass; the score at the 90th percentile is the score that $10 \%$ of students achieve or surpass. The range between the 25 th and 75 th percentiles (the inter-quartile range) represents the performance of the middle $50 \%$ of students.

The inter-quartile range (i.e. the range between the 75th and 25th percentiles) is highly variable. For example, Fazilka has an inter-quartile range of just 10 whilst Fatehgarh Shahib has a corresponding value of 40 . These values suggest that the class II population in Fazilka is far more homogeneous than that of Fatehgarh Sahib. Performance at the 10th and 90th percentiles respectively shows extremes in low and high achievement. The range between these two points, which includes 90 percent of the population, is highly variable ranging from 20 (Fazilka) to 92.5 (Gurdaspur).

The percentiles provide additional information when comparing Mathematical performance amongst districts. For example, when the districts are arranged in
the differences between adjacent distiricts tend to be small. However, the range of scores may not be similar. For example, there is no significant difference between the median score of the Amritsar (62) and Gurdaspur (62). However, the score ranges between the 25th and 75th percentiles are very different: Amritsar's range is 27.5 compared with Gurdaspur's range of 32.5. This indicates that whilst average achievement is very similar in the two areas, Gurdaspur has a more heterogeneous group of class II students than the Amritsar.

Table 4.13: Percentile scores in Mathematics for Districts

| District | Average <br> score | 10th <br> Percentile | 25th <br> Percentile | 50th <br> Percentile | 75th <br> Percentile | 90th <br> Percentile | Range <br> $\mathbf{7 5 - 2 5}$ | Range <br> 90-10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Amritsar | 62 | 35.0 | 50.0 | 65.0 | 77.5 | 86.5 | $\mathbf{2 7 . 5}$ | 51.5 |
| Barnala | 71 | 47.5 | 57.5 | 72.5 | 85.0 | 92.5 | 27.5 | 45.0 |
| Bathinda | 63 | 29.8 | 50.0 | 70.0 | 80.0 | 92.5 | 30.0 | 62.8 |
| Faridkot | 63 | 40.0 | 47.5 | 60.0 | 72.5 | 85.0 | 25.0 | 45.0 |
| Fatehgarh Sahib | 45 | 0.0 | 27.5 | 42.5 | 67.5 | 82.3 | 40.0 | 82.3 |
| Fazilka | 89 | 77.5 | 85.0 | 87.5 | 95.0 | 97.5 | 10.0 | 20.0 |
| Ferozepur | 72 | 52.5 | 62.5 | 72.5 | 82.5 | 90.0 | 20.0 | 37.5 |

### 4.4 Conclusion

The average achievement of students in Mathematics varies across the districts of Punjab. There is a highly significant difference between outcomes in high scoring districts such as (89\%) Fazilka, and low scoring districts such as Fatehgarh Sahib (45\%).
Districts also vary greatly in the range between their lowest and highest achieving students as revealed by their inter-quartile score ranges. Some Districts such as S.B.S. Nagar (13.1)
and Fazilka (10) have relatively homogeneous cohorts whilst others have far more diverse outcomes, e.g., Jalandher (37.5) and Fatehgarh Sahib (40.0).
It was detected that average achievement of boys and girls has no significantly difference. But in area concern there has been significant difference in the average of Rural and Urban area.
The survey did find that students from the SC category outperformed their peers in the, BC and General categories by a statistically significant margin. But in the management concern there have no significance difference in the average score of department and aided.
The following chapter provides more information about what class II students at various levels of achievement know and can do in the domain of mathematics.

## Chapter 5

## What students know and can do: Mathematics

### 5.1 Overview of the Mathematics tests

Also for mathematics two test form containing 40 items each was framed. In the both test form there have 15 common items. These served as 'anchors' so that the different test booklets could be linked together and hence, all items could be placed on a common scale. In total, the Mathematics assessment instrument comprised 50 unique items.

The items in each text booklet were chosen to cover the following range of mathematical domains from the Mathematics curriculum: the number system, basic operations, measurement, geometry and patterns. In addition to the content domains listed above, items were constructed to test a range of cognitive processes/domain ${ }^{4}$ (Classified by Bloom in 1956) or parameters in a variety of contexts. These were classified as Knowledge, Understanding, Application and Skill as described below:

## Parameters classification for test construction in Mathematics

Knowledge: In items testing this process, students are expected to answer using simple knowledge (recall) or recognition of terms and/or concepts familiar from their lessons.

Comprehension/Understanding: Demonstrate understanding of facts and ideas by organizing, comparing, interpreting, giving descriptions, and stating the main ideas
Application: Using acquired knowledge. Solve problems in new situations by applying acquired knowledge, facts, techniques and rules.
Skill: Separates material or concepts into component parts so that its organizational structure may be understood. Distinguishes between facts and inferences. Make judgments about the value of ideas or materials. In short skill of analyzing, evaluating and creating.

[^2]
### 5.2 Sample Item

The items reproduced below were used in one of the tests of Mathematics. Statistics showing how students responded to these items are given.

## Scale Score: 242

## व

The item given in the box is knowledge based and the item required that the student have ability to recall the process of knowing place value. The scaled score of this item was 242. The figure 5.1 shows that $53.8 \%$ of students in the sample were able to select the correct answer and how the remaining $46.2 \%$ responded.

Figure 5.1: Percentage of responses given by students

## Scale Score: 232

The scaled score of this item was 232 . The figure 5.2 shows that $59.7 \%$ of students in the sample were able to select the correct answer and how the remaining 40.3\% responded.

| :ntage of responses given by students |
| :--- |

## Scale Score: 240

The scaled score of this item was 240 . The figure 5.3 shows that $56.3 \%$ of students in the sample were able to select the correct answer and how the remaining $43.7 \%$ responded.

## age of responses given by students

## Scale Score: 253

The scaled score of this item was 253 . The figure 5.4 shows that $49.4 \%$ of students in the sample were able to select the correct answer and how the remaining 50.6\% responded.

## age of responses given by students

## Scale Score: 243

 उत घटापे।
(a) 55
(b) 5
(c) 45
(d) 65

The scaled score of this item was 243 . The figure 5.5 shows that $55.6 \%$ of students in the sample were able to select the correct answer and how the remaining 44.4\% responded.

Figure 5.5: Percentage of responses given by students

## Scale Score: 245

बिंतीभां भग्ता घट मव्टीभां गठ?

The scaled score of this item was 245 . The figure 5.6 shows that $54.2 \%$ of students in the sample were able to select the correct answer and how the remaining 45.8\% responded.

Figure 5.6: Percentage of responses given by students

## भह्ं टी चै?

The scaled score of this item was 238 . The figure 5.7 shows that $59.2 \%$ of students in the sample were able to select the correct answer and how the remaining 40.8\% responded.

Figure 5.7: Percentage of responses given by students

## Scale Score: 247

32,30,28,26,
(a) 22
(b) 20
(c) 24
(d) 27

The scaled score of this item was 247 . The figure 5.8 shows that $53.9 \%$ of students in the sample were able to select the correct answer and how the remaining $46.1 \%$ responded.

Figure 5.8: Percentage of responses given by students

## Scale Score: 258

2 यैमे से 6 मिवे $=\ldots \ldots \ldots \ldots$ यैमे
(a) 5
(b) 6
(c) 10
(d) 12

The scaled score of this item was 258 . The figure 5.9 shows that $47.1 \%$ of students in the sample were able to select the correct answer and how the remaining $52.9 \%$ responded.

Figure 5.9: Percentage of responses given by students

### 5.3 What can students do in Mathematics?

The items were designed to test the learning at different cognitive domains. These are classified as Knowledge, Understanding, Application and Skill. The table given below shows that how the sample students perform in various item related to different cognitive domains.

### 5.3.1. Cognitive Domain: Knowledge

Table 3.1 shows the performance of class II students on the Cognitive Domain: Knowledge.

Table 5.1: Performance of class II students on the Cognitive Domain: Knowledge

| Unique ID | Percentage correct | Scale scores |
| :---: | :---: | :---: |
| $\mathbf{1}$ | 77.4 | 183 |
| $\mathbf{8}$ | 53.8 | 242 |
| $\mathbf{1 4}$ | 63.5 | 225 |
| $\mathbf{2 0}$ | 70.5 | 204 |
| $\mathbf{2 3}$ | 55.5 | 241 |
| $\mathbf{2 4}$ | 47.1 | 256 |
| $\mathbf{2 7}$ | 80 | 194 |
| $\mathbf{2 9}$ | 83 | 193 |
| $\mathbf{3 3}$ | 63.8 | 227 |
| $\mathbf{4 0}$ | 59.8 | 232 |
| $\mathbf{4 6}$ | 59.2 | 238 |
| $\mathbf{5 0}$ | 59.2 | 237 |
| $\mathbf{5 5}$ | 68.7 | 223 |
| $\mathbf{5 7}$ | 69.2 | 217 |

On an average 65\% sample students were able to give right response on the item related to Cognitive Domain: Knowledge.

### 5.3.2 Cognitive Domain: Understanding

Table 3.2 shows the performance of class II students on the Cognitive Domain: Understanding.

Table 5.2: Performance of class II students on the Cognitive Domain: Understanding

| Unique ID | Percentage correct | Scale scores |
| :---: | :---: | :---: |
| $\mathbf{4}$ | 68.5 | 217 |
| $\mathbf{5}$ | 62.7 | 226 |
| $\mathbf{9}$ | 68.7 | 216 |
| $\mathbf{1 2}$ | 59.7 | 232 |
| $\mathbf{1 9}$ | 75.8 | 195 |
| $\mathbf{2 1}$ | 58 | 230 |
| $\mathbf{3 0}$ | 66.6 | 221 |
| $\mathbf{3 2}$ | 75.1 | 206 |
| $\mathbf{3 5}$ | 65.3 | 224 |
| $\mathbf{3 9}$ | 85.7 | 179 |
| $\mathbf{4 3}$ | 51.4 | 251 |
| $\mathbf{4 4}$ | 74 | 208 |
| $\mathbf{4 9}$ | 57.1 | 240 |
| $\mathbf{5 1}$ | 63.5 | 229 |
| $\mathbf{6 0}$ | 69.6 | 220 |
| $\mathbf{6 3}$ | 69.2 | 216 |

On an average 67\% sample students able to give right response on the item related to Cognitive Domain: Understanding.

### 5.3.3. Cognitive Domain: Application

Table 3.3 shows the performance of class II students on the Cognitive Domain: Application.

Table 5.3: Performance of class II students on the Cognitive Domain: Application

| Unique ID | Percentage correct | Scale scores |
| :---: | :---: | :---: |
| 3 | 77.7 | 193 |
| 6 | 66.9 | 218 |
| 10 | 76 | 203 |
| 11 | 72.5 | 211 |
| 15 | 70.5 | 215 |
| 16 | 56.3 | 240 |
| 28 | 82.7 | 186 |
| 34 | 60.1 | 233 |
| 36 | 76.2 | 205 |
| 37 | 55.6 | 243 |
| 42 | 75.4 | 204 |
| 45 | 54.2 | 245 |
| 48 | 58 | 240 |
| 53 | 62.2 | 234 |
| 54 | 52.1 | 250 |
| 62 | 47.1 | 258 |

On an average $65 \%$ sample students able to give right response on the item related to cognitive process of Application.

### 5.3.4. Cognitive Domain: Skill

Table 3.4 shows the performance of class II students on the Cognitive Domain: Skill.

Table 5.4: Performance of class II students on the Cognitive Domain: Skill

| Unique ID | Percentage correct | Scale scores |
| :---: | :---: | :---: |
| $\mathbf{2}$ | 67.7 | 216 |
| $\mathbf{7}$ | 56.4 | 237 |
| $\mathbf{1 3}$ | 69.8 | 206 |
| $\mathbf{1 7}$ | 65.1 | 223 |
| $\mathbf{1 8}$ | 52 | 247 |
| $\mathbf{2 2}$ | 33.5 | 308 |
| $\mathbf{2 5}$ | 44.7 | 263 |
| $\mathbf{2 6}$ | 49.4 | 253 |
| $\mathbf{3 1}$ | 64.3 | 226 |
| $\mathbf{3 8}$ | 67.3 | 223 |
| $\mathbf{4 1}$ | 81 | 189 |
| $\mathbf{4 7}$ | 51.1 | 251 |
| $\mathbf{5 2}$ | 53.9 | 247 |
| $\mathbf{5 8}$ | 71.1 | 200 |
| $\mathbf{5 9}$ | 53.7 | 246 |
| $\mathbf{6 4}$ | 44.7 | 264 |
| $\mathbf{6 5}$ | 76.4 | 198 |

On an average 59\% sample students able to give right response on the item related to Cognitive Domain: Skill.

## Chapter 6

Anchor item Analysis
This chapter shows the analysis carried out on anchor items. In the both tools (Language and Mathematics) 65 items each was prepared. Out of 65,15 served as anchor items. These anchor items were used two set of tools. These items were attempted by all students. The table given below compares the average performances of different groups. Performance is compared by gender, school location, social category and management.

Table 6.1: Gender wise Average score of districts in Mathematics

| Districts | Boys |  |  | Girls |  |  | Significance <br> difference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Avg. | SE | SD | Avg. | SE | SD | No |
| Amritsar | 66 | 2.4 | 21.5 | 66 | 2.7 | 21.3 | No |
